

DEPARTMENT OF COMMUNICATIVE SCIENCES AND DISORDERS

Trouble saying the “r” sound?

Some speakers have trouble with the “r” sound even after months or years of therapy. Studies have shown that computer-based therapy methods are sometimes helpful. We are comparing traditional and computer-based therapy methods to find out which is more effective.

We are looking for English-speaking children between 9 and 15 years of age to participate in our research study. Participants will receive FREE therapy 2-3 times per week for ten weeks.
